In this case study, a regional fish processing company engaged CPL Business Consultants to look at expanding its markets by selling fish oils and fish liver protein into pet food. CPL's detailed report and go-to-market recommendations allowed the client to make an informed decision for its market entry strategy.

The objective of this study was to assist the client in focusing its strategy in respect of the pet food business. Specifically, the study addresses the current and future status in pet food of new products derived from fish. The study investigated a number of possibilities that could provide future courses of action. It focussed on the probable future of these fish-derived products in pet foods and on a beneficial strategy in this area.

The study concluded that the pet food sector has a definite interest in fish oils as pet food ingredients, although the product should not be high-specification, high-cost oils. The study recommended that the client pursue opportunities in this sector with its new products.

An outline of the contents of the study can be found below.

FISH OILS AND FISH LIVER PROTEIN IN PETFOOD

Executive Summary

- Objective
- Methodology
- Main Findings
- Recommendations
 - Fish Oils as Pet Food Ingredients
 - Fish Oil as a Pet Care Supplement
